

The Virtual Meeting Service

Powered by Visual Nexus

What if you could gather your teams instantly with the click of a mouse How much would that be worth?

As organisations strive to increase their efficiency, reduce their carbon footprint and compete more effectively, the use of virtual meetings to enable dispersed teams to be more productive has moved to the forefront of the communications agenda. Virtual meetings are also playing a central role in developing new working practices.

For dispersed organisations or teams to be productive, excellent communication is important. However the written medium is only truly effective when used to inform. Even audio meetings and web conferencing leave a gap because, without seeing the other people, you don't know if they understand what is being said or are even paying attention. Only Face-to-Face communications is truly effective in moving ideas to actions and then action to results. Yet travelling to attend meetings is expensive and wastes valuable time and employees.

The virtual meeting service powered by Visual Nexus

The Visual Nexus service is a virtual meeting and collaboration service providing video, voice and data communication. It is easy to use and provides a true meeting-like experience, removing the barriers to effective communication over long distances.

The Visual Nexus virtual meeting service creates an effective online place for your virtual teams to gather and collaborate. It is a place where they can meet to discuss projects, receive training, make presentations or work cooperatively. Visual Nexus instantly enhances the productivity of dispersed or virtual teams, enabling your organisation to get the right people together at the click of a mouse.

Improve productivity of dispersed teams

Face-to-Face communication is essential for dispersed teams to be effective. You know if everyone is paying attention during a meeting and if they understand what is being said. Yet for dispersed teams to have Face-to-Face meetings has previously required team members to travel to the meeting. Often the time spent travelling is greater than the time spent in the meeting.

With Visual Nexus you can make video calls from where ever you want; from your desk at work, from home, or even from a wifi hotspot in a coffee shop. Because the solution is based on industry standards you can even call into the video conferencing system in the company's board room.

Get Started Straight away

Visual Nexus is available as a virtual meeting service available on a month by month rental basis. Once you have an account on the service you can install the software on your computer and start using it straight away. Your subscription is either for a number of users or for a number of concurrent calls. With the concurrent calls option you can install the Visual Nexus software on as many computers as you like. Any of your users up to the number you have subscribed for can be in virtual meetings or person to person video calls at any time. You can even make calls to your boardroom video conferencing system.

Anytime, anywhere virtual meetings

The Visual Nexus service provides you with a software application which turns your Windows PCs into a powerful conferencing and collaboration tool. By adding a Web Cam, microphone and the Visual Nexus software to your laptop computer you have an instant, fully featured video collaboration endpoint that you can take with you and use wherever you are.

Visual Nexus is an effective alternative to travelling to business meetings.

Virtual Meeting Service Features

FAST AND EASY TO GET UP AND RUNNING

- The virtual meeting service is a simple to use service. It is easy to setup and has an intuitive “point and click” user interface.
 1. Install a webcam and audio system on your computer
 2. Download the Visual Nexus software and you are ready to start using the system

MAKING CALLS OR JOINING VIRTUAL MEETINGS IS EASY

- With Visual Nexus you can see which of your contacts are online and which meeting rooms are available. Simply click on the name or the room to make a call. There's no need to plan ahead or book a call – it's just like making a telephone call.

MAKE PRESENTATIONS WHILE IN A CALL OR VIRTUAL MEETING

- You can give PowerPoint presentations while in a call or a virtual meeting. A set of annotation tools help to improve understanding.

COLLABORATE WITH YOUR COLLEAGUES IN A VIRTUAL MEETING

- Visual Nexus enables you to collaborate by sharing applications among the participants of a virtual meeting. Each can watch what others are doing and take turns to add their own edits.

MULTIPLE MEETING TYPES

- With Visual Nexus you can make person to person video calls, join an open multi-party virtual meeting room when everyone can speak at any time, or be called into a chaired meeting where the chairman has control over whose video is displayed and who can speak.

HIGH QUALITY AUDIO AND VIDEO

- Visual Nexus uses the same high quality video and audio systems that are used by the video conferencing room system in the boardroom. Using the service you can make calls to video conferencing systems and also have video conferencing room systems join a virtual meeting.

Access the service from anywhere

One of the historical problems with video conferencing systems are that had to be put on a private network connection. Hub Meeting has a special secure tunnelling feature that enables you to make calls from where ever you can get a broadband connection to the Internet, even over 3G+ broadband.

A Web Cam and a Microphone is all you need

Once your account is set up, all you need to do is connect up a standard webcam and audio kit to get started. As Visual Nexus runs on any standard Windows PC, your laptop instantly becomes a powerful video communications tool.

Optional features

The service also has a facility whereby you can subscribe for additional guest accounts so that you can invite people from outside of your organisation to join you in virtual meetings. You can also subscribe for higher bandwidth connections for use with higher definition video images.

How do I subscribe to the virtual meeting service?

The service is available on a monthly subscription. The minimum package is for five named users for three months. With this subscription you are provided with user names and passwords for the five user accounts. You can also subscribe for five concurrent calls. In this case you can create as many additional user accounts as you need within you own organization. Users download the video software client or use an existing video conferencing system. Subscriptions with higher numbers of user calls are also available.
